

FitBuddy – AI Fitness Plan Generator

4. Project Planning Phase

Planning Approach

The project is organized into milestones covering model selection and architecture, core functionality development, route development, frontend development, and deployment.

Milestone 1

Research and select the appropriate generative AI model, define application architecture, and set up the development environment.

Milestone 2

Develop core functionality, including workout generation, nutrition tips, feedback-based updates, and data storage.

Milestone 3

Develop routes.py and connect the frontend, AI functions, and database operations.

Milestone 4

Design and develop the user interface and dynamic Jinja2 templates.

Milestone 5

Prepare the application for local deployment and test the local deployment.

Development Setup

Create a virtual environment, install FastAPI, Uvicorn, Jinja2, SQLAlchemy, python-multipart, and the Google Generative AI package, then run the application with Uvicorn.

Project: FitBuddy – AI Fitness Plan Generator using Gemini Models.
